

Mahilesh A

AWS DevOps Engineer

Phone: +91-7538802066 | Email: mahilesh.connect@gmail.com

LinkedIn: www.linkedin.com/in/mahilesh-devops

Professional Summary:

Cloud-focused DevOps Engineer with **~5 years of experience** in AWS (EC2, S3, VPC, IAM, CloudWatch, EKS), Kubernetes, Docker, Terraform, CI/CD pipelines, and automation. Skilled in building scalable, secure systems with strong expertise in monitoring, troubleshooting, and scripting.

Certifications:

- AWS Certified Solutions Architect – Associate

Technical Skills:

- **Cloud Platform:** Amazon Web Services (AWS) – EC2, S3, VPC, IAM, ELB, RDS, Lambda, EKS, CloudWatch, CloudTrail
- **Cloud Security & Compliance:** AWS Security Groups, NACLs, KMS, CloudTrail, AWS Config, ACM, Encryption at rest & in transit, Least-Privilege Access, Network Isolation, Secrets Management
- **Operating Systems:** Linux
- **Infrastructure as Code (IaC):** Terraform (modules, workspaces, AWS provider)
- **Containerization & Orchestration:** Docker, Kubernetes (EKS, Pods, Deployments, Services, ConfigMaps, Secrets, Ingress, RBAC), Helm, ArgoCD
- **CI/CD & DevOps Tools:** GitLab CI/CD, Jenkins, GoCD
- **Scripting & Automation:** Ansible, Shell Scripting (Bash, Cron), Python (automation scripts)
- **Monitoring & Logging:** ELK Stack, Prometheus, Grafana, AppDynamics, AWS CloudWatch
- **Security & Access Management:** AWS IAM, ACM
- **Build & Artifact Management:** Maven, Nexus Artifactory
- **Messaging & Middleware:** Kafka, SonicMQ
- **Code Quality:** SonarQube

Work Experience:

Sept 2021 – Present

Radial Omnichannel Technologies, Chennai - DevOps Engineer

- **Provisioned and managed AWS infrastructure** including EC2, S3, VPC, IAM, Security Groups, Load Balancers, and EKS using **Terraform**, enabling scalable, repeatable, and secure deployments.
- **Managed secure access** using AWS IAM policies, roles, and ACM certificates, ensuring compliance with organizational security standards.
- Implemented **cloud security best practices** including network isolation using Security Groups and NACLs, encryption using AWS KMS, and continuous auditing with CloudTrail.
- Actively participated in **cloud migration and modernization initiatives**, supporting the transition of **on-premises applications to AWS and containerized platforms**.
- **Deployed and managed containerized applications on AWS EKS**, handling Kubernetes objects such as Pods, Deployments, Services, ConfigMaps, Secrets, Ingress, and RBAC.
- **Supported Linux-based** on-premises infrastructure and middleware platforms.

- **Administered on-prem application servers** including Apache and Tomcat, performing deployments, configuration tuning, log analysis, and performance troubleshooting.
- **Built and optimized Docker images**, managed container registries, and implemented container lifecycle management best practices.
- **Developed Shell scripts** to automate operational tasks, health checks, log analysis, backup validation, and deployment verification across cloud and on-prem environments.
- **Implemented and maintained CI/CD pipelines** using Jenkins, GoCD, and GitLab CI/CD for both on-prem and AWS-hosted applications.
- **Troubleshooted and resolved P1/P2 production incidents** across cloud and on-prem systems, collaborating closely with application, middleware, and support teams.
- **Implemented centralized monitoring and logging** using ELK Stack, Prometheus, Grafana, and AWS CloudWatch, enabling proactive alerting and faster incident resolution.
- **Automated application deployments** using Maven, Apache, and Tomcat, supporting both **monolithic (on-prem)** and **containerized (AWS/EKS)** workloads.
- Managed Kubernetes application deployments using Helm charts and supported GitOps-based deployment workflows using Argo CD.

Projects:

Project 1: On-Prem to AWS EKS Application Migration

- **Environment:** AWS, EKS, Docker, Terraform, Jenkins, Linux
- **Description:**
 - Migrated Java applications from on-prem Tomcat servers to AWS EKS.
 - Containerized applications using Docker and deployed via Kubernetes.
 - Provisioned AWS infrastructure (VPC, EC2, EKS, IAM, ALB) using Terraform.
 - Implemented monitoring using CloudWatch, Prometheus, and Grafana.

Project 2: CI/CD Pipeline Automation for Cloud & On-Prem Applications

- **Environment:** Jenkins, GitLab CI/CD, GoCD, Docker, Maven, AWS
- **Description:**
 - Designed CI/CD pipelines for cloud and on-prem applications.
 - Automated builds, artifact packaging, and container image creation.
 - Integrated SonarQube and Nexus Artifactory into pipelines.
 - Implemented environment-based deployments with approval gates.

Project 3:- AWS Infrastructure Automation Using Terraform

- **Tools:** AWS (EC2, VPC, IAM, S3), Terraform, Git
- **Description:**
 - Automated provisioning of AWS infrastructure using Terraform.
 - Managed multi-environment deployments with variables and state files.
 - Enforced IAM least-privilege security best practices.

Education:

- Bachelor of Engineering – Knowledge Institute of Technology, 2019
